Windy

Rainbow

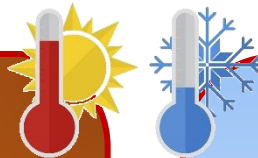

Tornadoes / Hurricanes

Clear

In hot places:

- ❖ Temperatures are mostly high; the sun shines all day long making it very warm. You may get tropical storms.
- ❖ There is lack of water and high rates of evaporation; it is hard for plants to grow and stay alive.
- ❖ Houses in hot places are painted light to reflect the heat. They have air conditioning to keep their house cool inside.

In cold places:

- ❖ Temperatures will be low. There may be snow falling or freezing rain.
- ❖ Water freezes at 0°C; it is hard for vegetation to get water to help them grow.
- ❖ Houses in cold places are insulated, so that they can keep the cold temperatures out. They will have central heating and fires to warm the house in colder months.
